RESILIENZA E VULNERABILITÀ AL RISCHIO

Despite federal laws prohibiting discrimination against individuals who are deaf, hard of hearing or deaf-blind, a 2006 report on Hurricane Katrina by the National Organization on Disability, Report on Special Needs Assessment for Katrina Evacuees (SNAKE) Project, identified that "the most underserved group were those who are deaf or hard of hearing."

Less than 30% of shelters had access to American Sign Language interpreters, 80% did not have TTYs, and 60% did not have televisions with open caption capability.

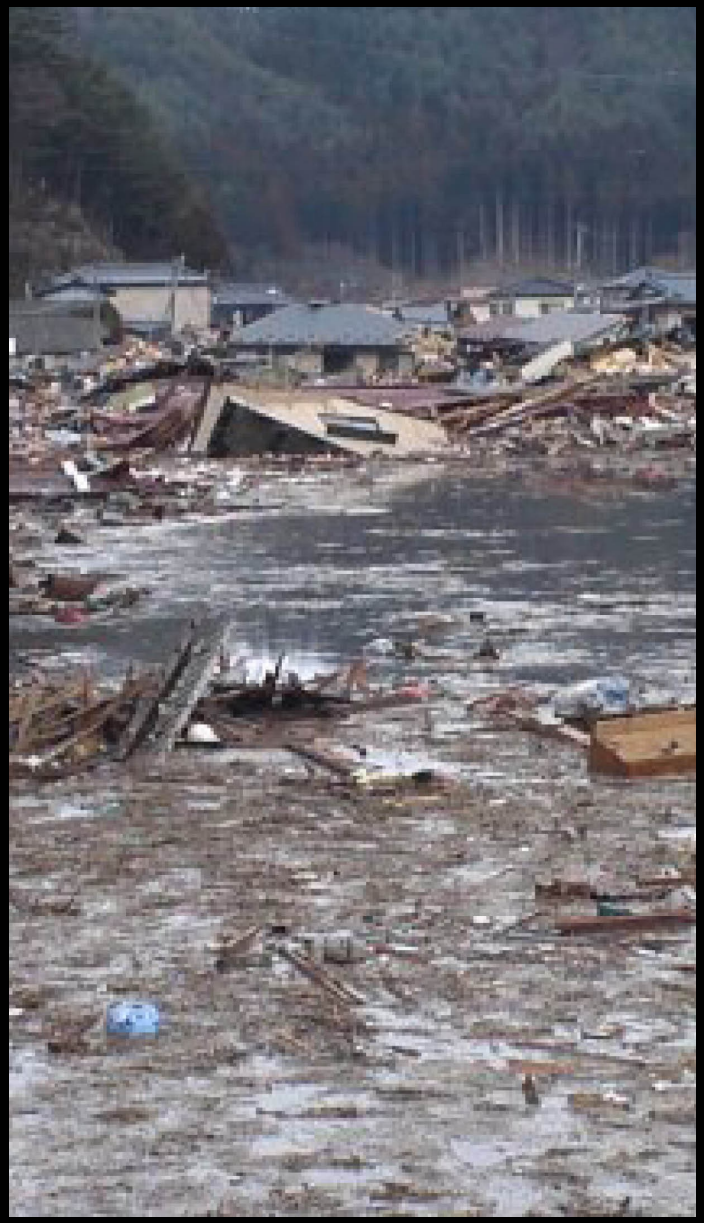

Only 56% of shelters had areas where oral announcements were posted so people who are deaf, hard of hearing or out of hearing range could go to a specified location to get or read the content of announcements.

This meant that the deaf, hard of hearing or deaf-blind had no access to the vital flow of information."

Report on Special Needs Assessment for Katrina Evacuees (SNAKE) Project, Pgs 8 – 9 National Organization on Disability (2006)

RESILIENZA E VULNERABILITÀ AL RISCHIO

Death Rate in the East Japan Disaster

- NHK report (NHK "Welfare network" Team)

	Deaths	Population	Death rate
Total (3 Prefs*.)	12,853	1,244,167	1.03%
Impaired Total	1,388	67,509	2.06%
Physical	1,243	53,928	2.30%
Visual	74	3,755	1.97%
Hearing	75	3,753	2.00%

*Iwate, Miyagi, Fukushima Prefectures

Impairments caused double death rate.

- Improving accessibility of broadcasting is VITALLY important for impaired people.
